## Our Solutions

With ever increasing costs for polymers and additives and pressures to reduce staffing overheads, we are constantly looking for ways to help you work more efficiently and reduce wastage. TH Plastics has many years experience in the plastics industry and our technical expertise and innovative solutions can help you save time and money. We can offer a fully integrated solution, helping you to choose the right equipment for needs. We will recommend machines that will work with your existing systems for the most optimum performance within your budget.

For example, the TSM gravimetric blender, with its unique patented mixing system and slide gate technology makes the dosing process accurate and right first time. And because the materials are mixed uniformly irrespective of bulk density, combined with the mixers cramming action, higher regrind percentages and greater throughputs are achieved.

We can trial solutions at our 5,000 sq ft Demonstration and Training facility, proving the time, energy and cost savings you could achieve. We work with our sister company, TH Electrics to ensure installations are seamless, with as little disruption to your business as possible. We can then offer you peace of mind with a service contract so you can benefit from preferential rates and guaranteed response times 24 hours a day 7 days a week - a truly integrated end-to-end solution.

### We can help you with:

- [Recycling systems](#)
- [De dusting systems](#)
- [Size reduction solutions](#)
- [Loss in weight solutions](#)
- [Conveying systems](#)
- [Centralised systems](#)

Call us today to find out how we can help your business on **01457 855514**.
